Who are we?

aDvens is a leading independent European cybersecurity company. Since its creation in 2000, the company's name – "aDvens", meaning "Together and ahead" – has been its motto.

Our mission is to protect public and private organizations from cyber threats – 24/7. The company employs over 600 people and has offices in France, Germany, Spain, Italy, Canada and Tahiti. aDvens offers Managed Detection & Response Services (SOC-as-a-Service) and selected consulting services in the areas of cyber-security and OT security.

We always combine our innovative business model with a strong social commitment that is firmly anchored in our corporate DNA. 50 percent of the company's value goes to the "aDvens for People & Planet" foundation fund to support initiatives for inclusion, education, environmental and climate protection.

What's in for you?

Looking for a Cybersecurity service provider who is able to master the entire prevention, detection and response cycle? Look no further!

With our mySOC offering, aDvens is providing exactly this. Based on five fundamental design principles our services are dedicated to one mission: anticipate, detect and react as fast as possible to defend you against a continuously evolving threat landscape.

Fusion Center: Fusing the skills of 200+ experts with reliable service delivery processes of our mySOC organization including advanced CSIRT/CERT capabilities.

mySOC Platform: One central platform to provide efficient and effective 24/7 Managed Detection & Response services in a sovereign and flexible way with a detection-as-code engine applying complementing detection approaches including AI/ML-based detections and proactive threat hunting.

Data centric approach: A centralized data repository containing alerts, logs, metadata and IoC with a sustainable streamlined data collection and the flexibility to add new data sources with ease.

mySOC Portal: Single pane of glass to provide transparency, facilitate collaboration and observe service quality.

Trajectory: Continuously improve your detection coverage by combining different detection approaches.
